

W³Net™ Document Exchange Platform

Manual entry of business documents is time intensive and prone to error. Moving data and business documents electronically between computer applications and trading partners removes manual data entry and takes much of the friction out of your business process. Connect once to our W³Net Document Exchange Platform and allow us to be your electronic communication gateway.

- Reduce Manual Data Entry
- Improve Data Accuracy
- Communicate and Access Data in Real Time
- Turn Data into Information
- Deepen Existing Business Relationships
- Reach out to New Customers
- Add Dollars to the Bottom

Enable your business with electronic Document Exchange

The W³Net Document Exchange Platform works in virtually any electronic format.

- W³Net supports multiple data formats like EDI, XML, flat file and ODBC data connections and allows you to receive and send EDI documents even when your system is not EDI capable
- Documents can be transmitted via VPN connection, ftp/s, http/s or even by email
- W³Net removes the need to coordinate product information or descriptions (SKUs, IDs, codes or attributes) between you and your Suppliers and Customers ensuring item synchronization and identification of products based on the direction of flow. (Supplier will see their own SKU numbers and descriptions and its Customers will see their own.)

Connect Once

Leverage the W³Net Document Exchange Platform by making it your single connection to all your suppliers and customers.

- All trading partner formats are mapped to the standard xCBL data format
- Once set-up, you can connect to any existing trading partner and begin sending and receiving electronic business documents
- Traditional VAN charges are eliminated with W³Net as your communication gateway
- Document translations and transmissions are in real time
- W³Net can connect you with anybody, anywhere, anytime

Central document tracking and reporting interface

Capture the information flowing between you and your trading partners and make it available for viewing and reporting through our W³Net Document Exchange Platform.

- View documents as they exchange through the W³Net system
 - By trading partner
 - Document type
 - Document direction
 - Date ranges and more
- View reports and analyze data of exchanged documents
- Print or resend orders, order responses, invoices, etc from a central user interface
