

W³Net, Ltd.

- A privately owned Company located in Yelm, Washington 65 miles south of Seattle
- W³Net™ specializes in Web-based software development, systems integration, business process and IT consulting
- Our flagship product is W³Net™ CBOS™ (Collaborative Business Operating System)

CBOS™ Architecture

- An Web-based n-tier application developed in Java (J2EE compliant)
- Constructed and accessed in a modular fashion
- Presentation layer separated from business logic
- Currently running on IBM WebSphere 4.0 application server and Microsoft SQL server 2000 database operating on Windows 2000 server
- Web Services enabled

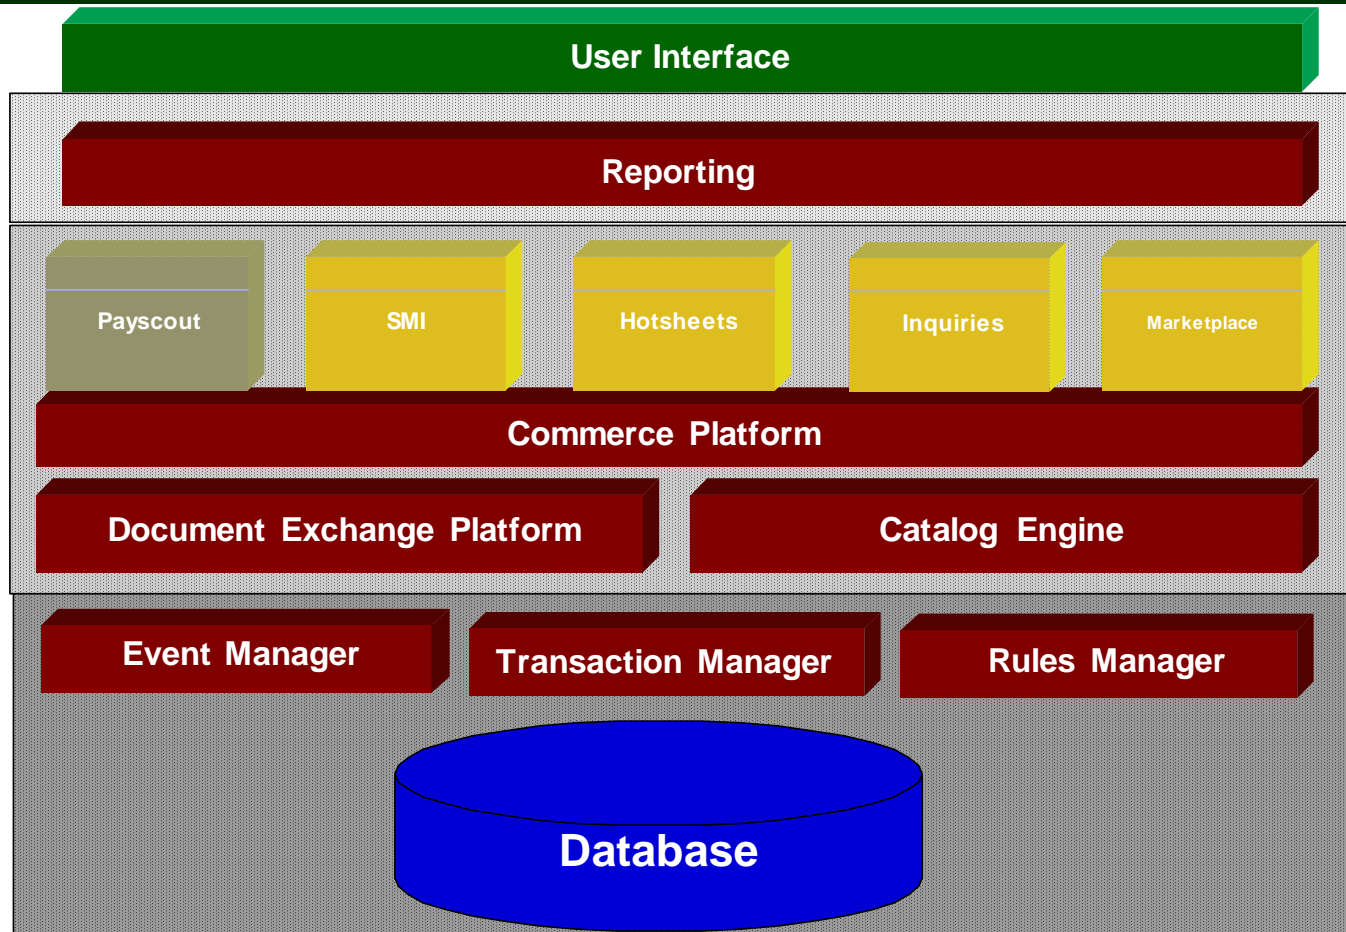

CBOS™ Components

CBOS is constructed in a modular fashion comprised of the following components:

- Commerce Platform
- SMI Module (Supplier Managed Inventory)
- Document Exchange Platform
- Catalog Engine
- Administrative Module

W³Net™ CBOS™ Diagram

W³Net™ Commerce Platform

The transactional heart of the CBOS™ business process

W³net™ SMI

Beyond mere sourcing and procurement, W³Net™ SMI enables automated inventory management and order replenishment between enterprises

- Consignment module
- Sales module
- Arrange shipping

W³Net™ SMI Diagram

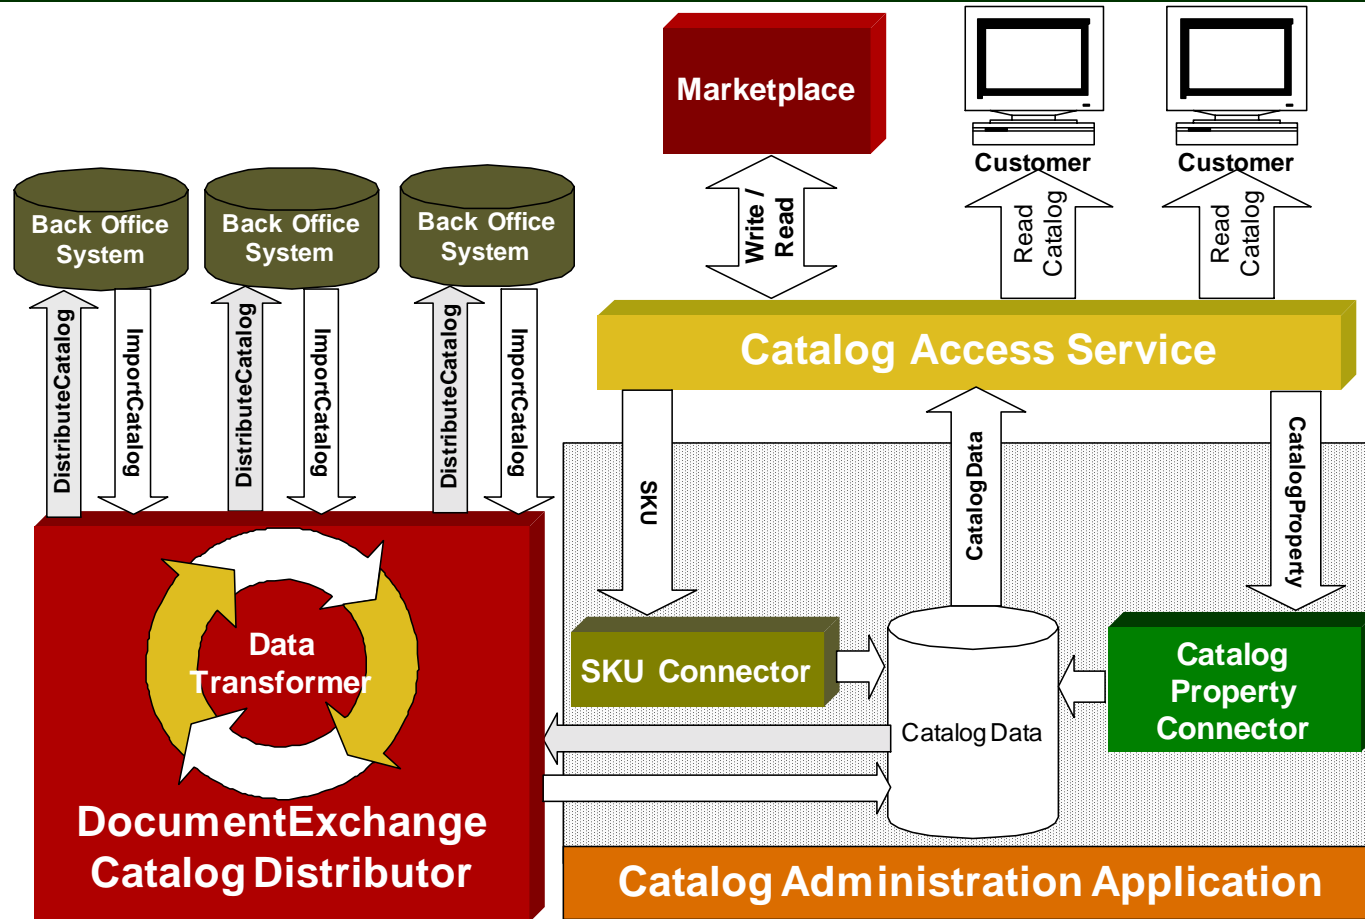

W³Net™ Catalog Engine

The content server and content accelerator
for CBOS™

W³Net™ Catalog Engine Diagram

Administrative Module

- Every Web page supporting CBOS™ has a corresponding Administrative page that allows non-technical resources to manage the business logic of CBOS™ on an as needed basis
- Within the Administrative Module is access to the rules manager, transaction manager, event manager and user set-up functions

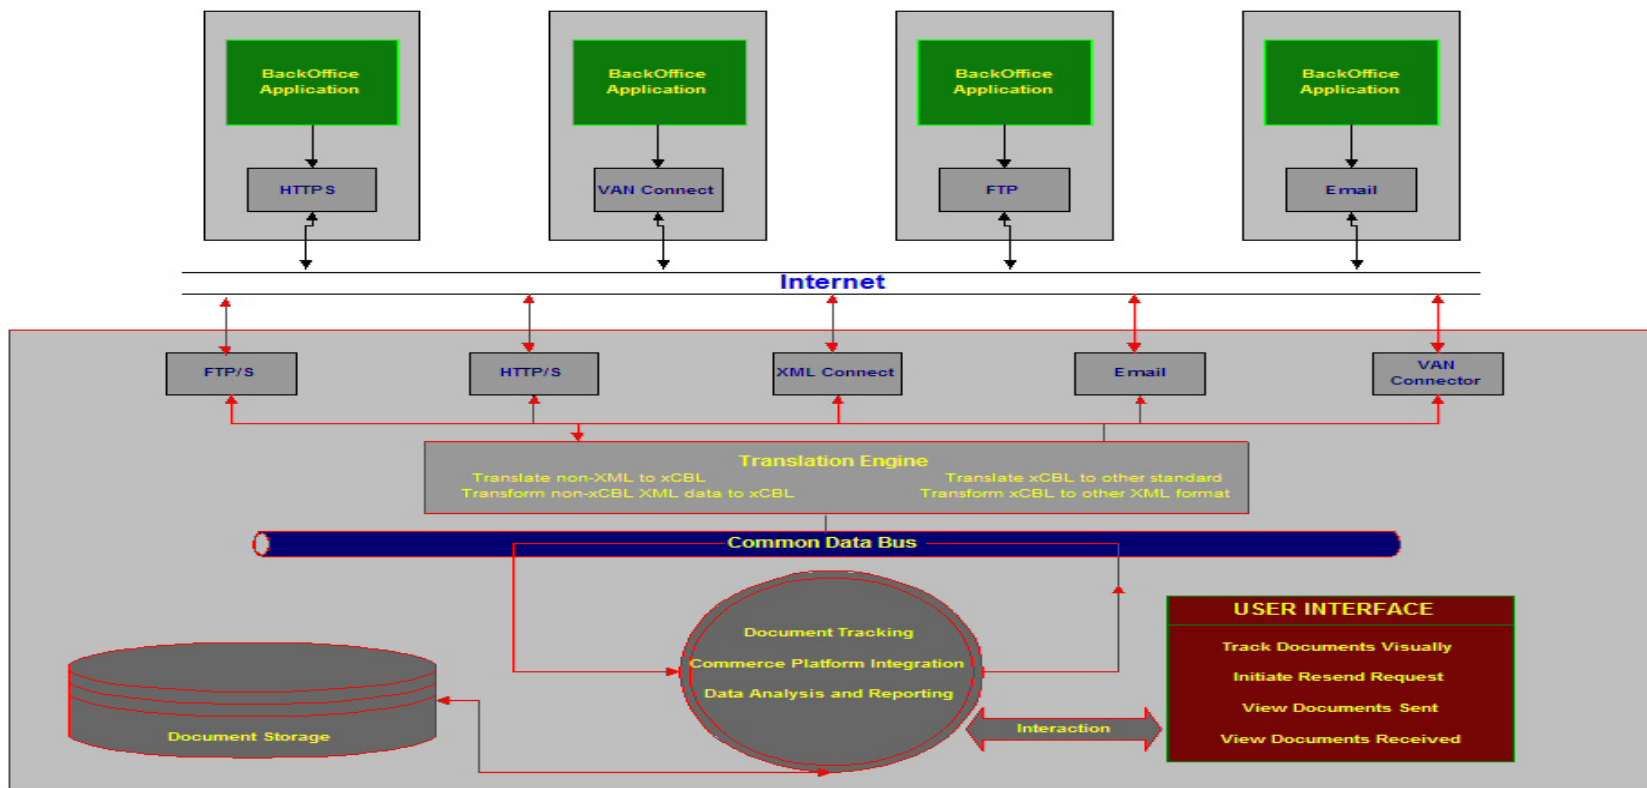

W³Net™ Document Exchange Platform

- The data and document transformation and delivery platform enabling CBOS™ to communicate between enterprises without regard to data or file format differences
- W³Net DXP supports multiple data formats like EDI, XML, flat file and even ODBC data connections
